

AFT Technical Bulletin #2025-01

To: All Progressive AFT Competitors
Posting Date: 12/20/2024
Effective Date: 12/20/2024
Subject: 2025 SuperTwins minimum machine weight

This bulletin supersedes all previously published rules, bulletins, or approvals.

A typographical error has been identified in the published 2025 Progressive American Flat Track Rulebook.

- In 2024, the minimum weight for AFT SuperTwins with race-only designed engines was 320 pounds, while the minimum weight for production-based AFT SuperTwins was 310 pounds.
- The 2025 rulebook mistakenly listed the minimum weight for all AFT SuperTwins as 320 pounds.

Correction: Starting in 2025, all AFT SuperTwins are production based machines therefore the correct minimum weight is **310** pounds, consistent with the 2024 production-based specification.

2.4 AFT SuperTwins Technical Rules

2.4.15 Weight Limits

- a. Motorcycles must weigh a minimum of ~~320~~ **310** lbs.
- b. Rear-wheel assembly must not exceed a maximum of 43 lbs.
- c. See [Section 2.10 Weight Testing Procedures](#) for definition of rear-wheel assembly and testing procedures.
